

Total Retired Coal Capacity (GW)
(1990-2024)

127.10

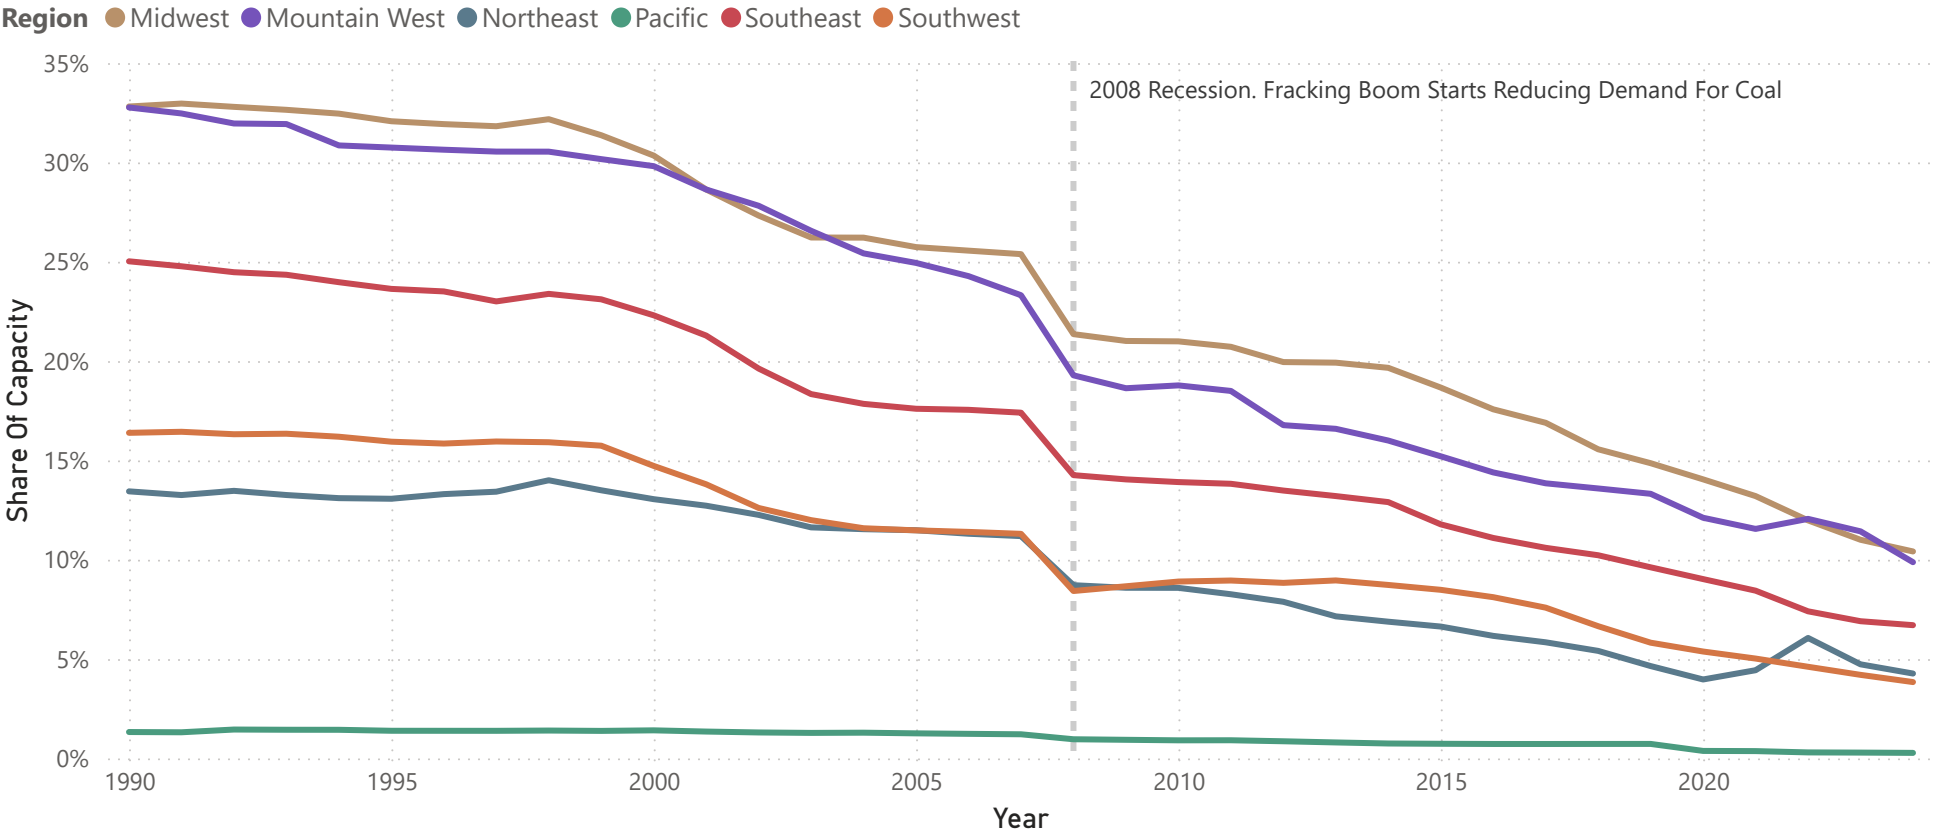

Coal Capacity (GW)
As of 2024

174.18

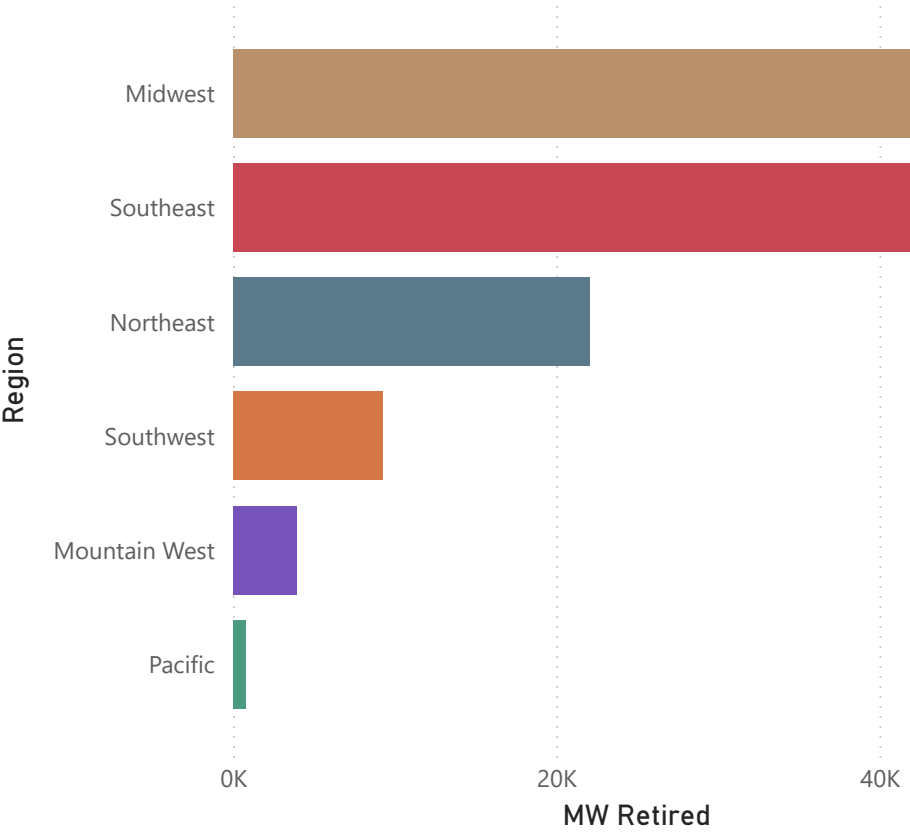

Total % Point Decline (1990-2024)
20.28% to 5.89% (-14.39%)

Capacity measured in megawatts (MW). 1,000 MW = 1 gigawatt (GW). Coal capacity represents the maximum electricity a region's coal plants can generate at full output.

Share Of Total Generation Capacity

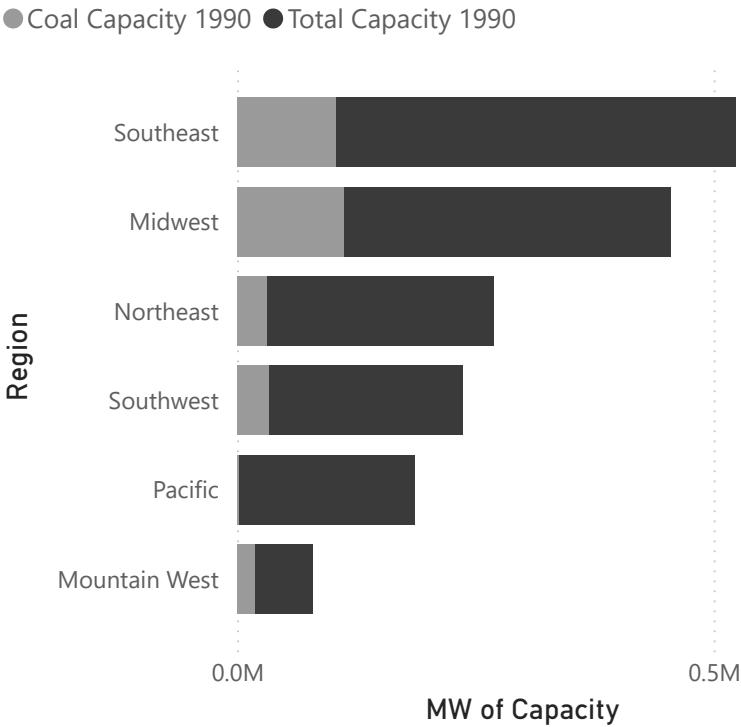

Total MW Retired by Region (1990-2024)

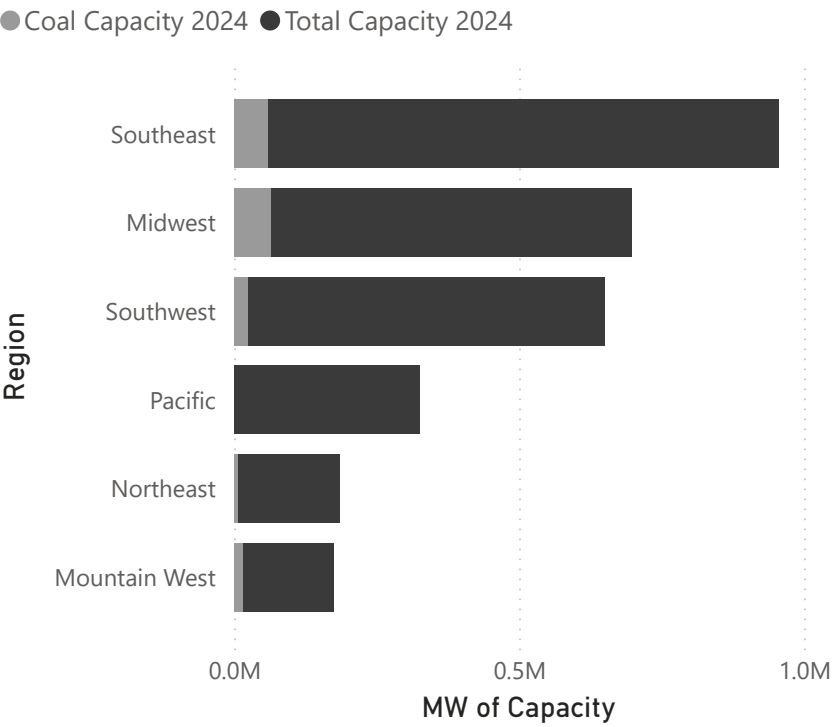

The Mountain West and Midwest both reduced coal's share of total capacity by roughly 22 percentage points. However, due to the Mountain West's much smaller power grid, this translated to just 3,936 MW retired compared to the Midwest's 46,392 MW.

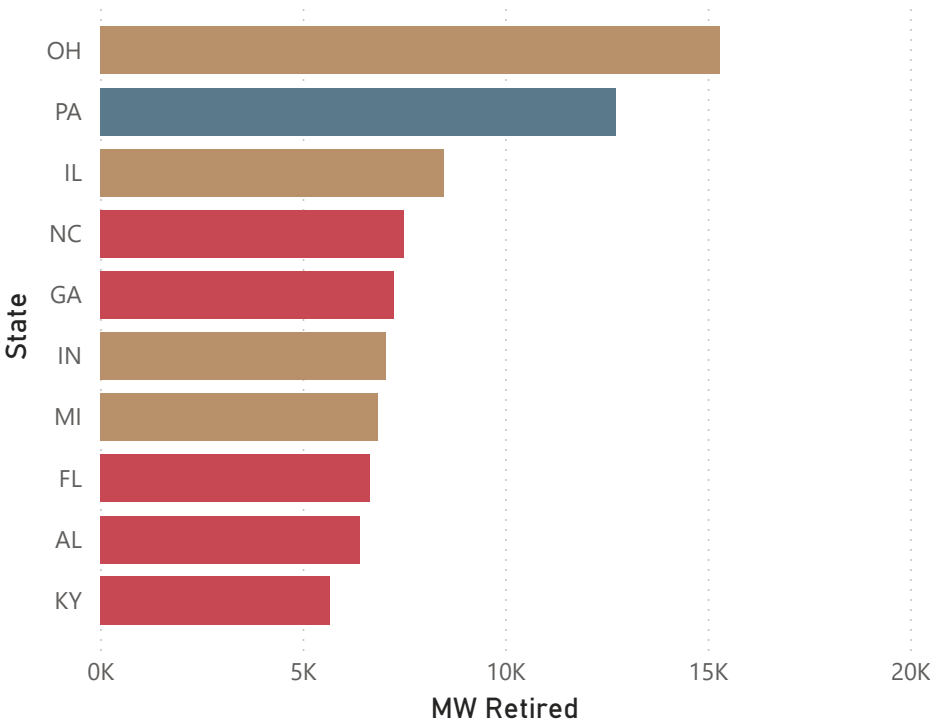

Total vs. Coal Capacity by Region (1990)

Total vs. Coal Capacity by Region (2024)

Top 10 States by Coal Retirements (1990-2024)

No states in the Southwest, Mountain West, or Pacific made the list of the top 10 states for retired coal capacity.
